ESSENTIALS MEDI SPA

How does Laser Hair Removal work?

Anagen: The growth stage, when a strand of hair is at its strongest

Catagen: The transitional stage, when that strand begins to come loose from the follicle

Telogen: The shedding stage, when the strand falls out and is replaced by a new hair

Gentle Hair Removal is a laser treatment targeting the hair follicle at the root and combines the power you need with speed and comfort you can trust, regardless of your skin type! Gentle Hair Removal is easy on your skin, delivering results with less discomfort.
